Stratabound Options Quebec Gold/Base Metals Prospect

Stratabound Minerals Corp. has optioned 28 contiguous claims covering 1,569 hectares (3,877 acres) in Enjalran and Massicotte Townships, northwest Quebec. The claims, known as the Enja Property, are situated 35 kilometres west of Selbaie Mine (zinc-copper-silver-gold), between the Detour Lake and Casa Berardi gold camps. Drilling by previous operators at both ends of the seven kilometre long property indicated extensive widths of sulphide and oxide iron formations containing anomalously high gold content.

A recent airborne geophysical survey by Terraquest Ltd. has outlined extremely strong magnetic anomalies on the property. A lithostructural interpretation by Alain Moreau, M.A.Sc. of Technologies 43S Inc., based on remote sensing satellite imagery, has identified both Detour Lake-type gold and Selbaie-type base-metal targets on Enja. Specific areas are recommended for drill testing and additional staking.

Stratabound can earn a 100% interest in the Enja Property by (a) paying the vendors approximately \$1,300 for claim renewal costs and \$40,000 for exploration costs relating to the geophysical survey, the remote sensing interpretation, and a geological report; (b) incurring exploration expenditures of at least \$100,000 on the claims prior to January 3, 2008, which includes the \$40,000 already paid; (c) issuing the vendors 100,000 shares upon receipt of regulatory approval; and (d) issuing an additional 50,000 shares or a cash payment of \$25,000 before January 3, 2008.

The vendors will also receive a 2% net smelter return royalty on any revenues Stratabound receives from sales of metals and minerals from the claims and from any additional lands staked by Stratabound within one kilometer. If it so chooses, Stratabound can buy back one-half of the royalty at any time for \$1,000,000.

Previous work has shown that no outcrop is present on the property. Future work will rely on geochemistry, geophysics and drilling. Further details will be provided following additional evaluation and ground acquisition.
