Stratabound Finds New Gold Zone at Big Presque Isle, New Brunswick

- New gold zone is cut as Trans Canada Highway proceeds north
- 1.54 kilogram grab sample grades 6.31 g/t gold

Stratabound Minerals Corp. is pleased to announce that an additional gold zone has been found by mapping and sampling new road cuts on the company's Big Presque Isle claims, 27 kilometres north of the town of Woodstock. The new discovery is situated 163 metres north of the breccia-hosted mineralization reported in the company's previous news release dated April 9, 2007.

A 1.54 kilogram sample, collected from a 4.8 metre wide mineralized gabbro at the base of a new 20.5 metre high rock cut, has returned a grade of 6.31 g/t gold.

Prospecting during mid-April has located similar looking mineralization 740 metres north of this sample location. Assays are pending for 20 additional samples.

Stratabound has staked 8 more claims, increasing the size of the Big Presque Isle property to 78 claims.

In addition, the company has staked 5 new claim blocks, totaling 34 claims, distributed along a 58 kilometre stretch of the planned route of the Trans Canada Highway. These represent areas where regional geological maps indicate that dyke swarms and faults, similar to those at Big Presque Isle, will be uncovered during current road construction.

The Big Presque Isle claims will be evaluated for gold potential during spring and summer 2007, and an early drilling phase is anticipated.

The rock sample was submitted for analysis to ALS Chemex Laboratories in Sudbury, Ontario. Gold was assayed by fire assay with atomic absorption finish. The technical information contained in this release has been reviewed by John Duncan, P.Geo. and Stan Stricker, P.Geol., Qualified Persons as defined in National Instrument 43-101.

Stratabound Minerals Corp. is a Canadian junior mining and exploration company currently active in New Brunswick, Quebec and Ontario.
