[Stratabound commissions Resource Estimates, Preliminary Economic Assessment of Bathurst base metal deposits](#)

CALGARY, ALBERTA, August 25, 2010 – Stratabound Minerals Corp. is pleased to announce that it has commissioned independent resource estimates and a Preliminary Economic Assessment (PEA) of its 100%-owned Captain, CNE and Taylor Brook base and precious metal deposits located in the Bathurst Mining Camp of northern New Brunswick.

Resource estimates for the CNE and Taylor Brook deposits will be carried out by Wardrop, A Tetra Tech Company ("Wardrop"). They will also provide Stratabound with a PEA document, compliant with National Instrument 43-101, to investigate the viability of production from the combined resources of all three deposits. Mercator Geological Services Ltd. of Dartmouth, Nova Scotia will update their October, 2008 Captain Deposit resource estimate to incorporate additional drilling completed since then.

This work is being partly funded by a \$100,000 grant awarded to Stratabound for evaluation of the CNE deposit under the Province of New Brunswick's Deposit Evaluation Program.

The resource models for the three deposits will be evaluated by Wardrop's open pit and underground mine engineers in order to develop a preliminary recommendation of the optimal mining method for each resource. These recommendations will be reviewed with Stratabound's technical team to identify the best approach for open pit, underground or a combination of both for each property in order to maximize the economics of the project.

The PEA will also assess the project economics for combining the Captain, CNE, and Taylor Brook resources into a single mill feed. This study will incorporate operating and capital costs for mining and milling using Wardrop's current cost database for the Bathurst camp, based on its recent PEA work.

The proposal will evaluate processing the combined mineralization from the three properties at one of three mill options (Caribou, Brunswick No. 12, and a new mill construction). The base case to be presented in the economic evaluation will be a toll mill option.

Stratabound is hopeful that Wardrop's PEA will result in advancing the properties toward a feasibility study. The project is located in a favourable mining jurisdiction with well developed infrastructure that would have a positive impact on operating and development costs.

About Stratabound Minerals Corp.

Stratabound is a Canadian natural resource company exploring and developing gold and base metal properties in eastern Canada. It is currently focused on building a resource base in the infrastructure-rich Bathurst Mining District of northern New Brunswick. Three world-class base metal mines occur within a 20 kilometre radius of Stratabound's Captain/CNE and Taylor Brook properties, namely Brunswick No. 12, Brunswick No. 6, and Heath Steele.
